EDUCATION

Walchand Institute Of Technology

B.Tech in Information Technology, Minor in E.N.T.C | CGPA: 9.68

Solapur, Maharashtra

June 2023 – May 2027

S.E.S Jr. College

HSC | 75%

Solapur, Maharashtra

June 2021 – May 2023

EXPERIENCE

Co-Founder & Full Stack Developer

June 2025 – Present

Nexentia — Client-Based Software Solutions

- Built and shipped 5+ production systems for clients across retail, healthcare, hospitality, logistics, and warehouse management, handling end-to-end architecture, delivery, and client communication.
- Designed scalable backend systems using Node.js, Express, PostgreSQL, and Prisma including OPD management, inventory, and finance platforms with RESTful APIs and WebSocket-based real-time features.
- Made cost and scalability trade-offs directly with clients, translating business workflows into technical solutions under real delivery constraints.

MERN Stack & GenAI Intern

July 2025 – September 2025

ANK Upsurge Digital

- Built RESTful backend routes and integrated Vercel AI SDK to power an LLM-based task management system for ADHD users.
- Wrote unit tests and assisted in frontend-backend integration, contributing to application reliability and code quality.

PROJECTS

Trinetra — AI Public Safety Platform | [GitHub](#) | React, Next.js, Node.js, Express.js, Flask, Firebase

- Engineered the integration layer of a 6-service AI public safety platform built for mass gatherings like Mahakumbh, connecting independent detection services and LLM agents into a unified system.
- Built call-based LLM emergency agent using Twilio + VideoSDK — users on basic keypad phones access voice-guided medical and safety assistance with no smartphone required.
- Implemented Lost & Found pipeline by passing crowd video frames to an LLM agent for person identification and matching against uploaded reference photos.
- Integrated Gemini 2.5 Flash for real-time threat classification across CCTV frames, returning structured risk levels to the admin dashboard via WebSocket.

CureConnect — Telemedicine Platform | [GitHub](#) | React, Next.js, Node.js, ZegoCloud, WebSockets

- Built a telemedicine platform for medically underserved areas video consultation via ZegoCloud, real-time doctor-patient chat over WebSockets, and nearest hospital locator via Google Maps API.
- Implemented AI-powered disease prediction, users upload X-rays or medical films and receive LLM-assisted structured diagnosis.
- Integrated IVRS via Exotel for voice-based medical access on keypad phones, and shipped medicine e-commerce with RBAC, multilingual support, and voice navigation.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Java, C, SQL

Frameworks & Technologies: Node.js, Express.js, Next.js, React.js, Flask, REST APIs, WebSockets, NumPy, Pandas, Matplotlib, Seaborn

AI & ML: Vercel AI SDK, LLM Agent Integration, RAG Pipelines, Prompt Engineering

Databases & ORM: PostgreSQL, MySQL, MongoDB, Firebase Firestore, Prisma, SQLite

Tools & Platforms: Git, GitHub, Docker, Postman, Cursor, Linux, Vercel, Render, Cloudinary

Core Subjects: DSA, OS, DBMS, Computer Networks, OOP

ACHIEVEMENTS

- Won 4 national-level hackathons
- 20+ merged pull requests to [stdlib-js/stdlib](#) — open-source JavaScript/C library with 4k+ GitHub stars
